

Center for International Earth Science Information Network EARTH INSTITUTE | COLUMBIA UNIVERSITY

#### Our vision

We envision a world where data analytics puts everyone on the map, ensuring that especially the most vulnerable count.

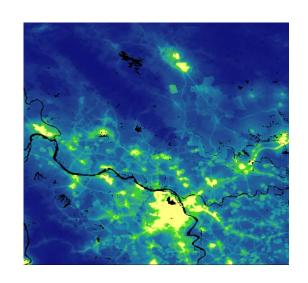

#### What we do

GRID<sup>3</sup> provides support to low- and medium-income countries to produce, collect, analyse, integrate, disseminate, and utilise high-resolution geo-referenced data for development and humanitarian decision making.

#### **Current Focus**

GRID<sup>3</sup> is underway within six African countries:

Nigeria

Mozambique

Zambia

Tanzania

Democratic Republic of the Congo

South Sudan

# A Global Partnership

#### **Funding Partners**

#### **Implementing Partners**

# Coordinating/Managing Partner

Oversight and Decision Making

Technical Expertise and Capacity Strengthening

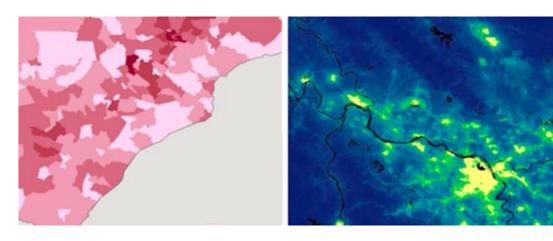

Technical Support and Advocacy

## **Spatial Data Production**

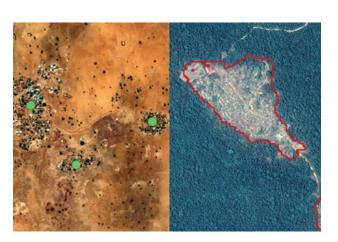

GRID<sup>3</sup> helps produce three spatial data layers to meet critical development needs:

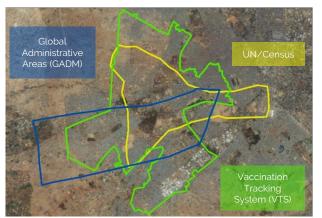

**High-Resolution Population Maps** 

**Settlement Locations** 

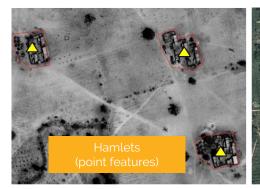

**Subnational Boundaries** 

#### **Settlement Locations**

Comprehensive settlement locations provide a real world picture of where people live to target service delivery and development investments.

GRID<sup>3</sup> identifies settlements and classifies urban neighborhood types using high resolution satellite imagery.

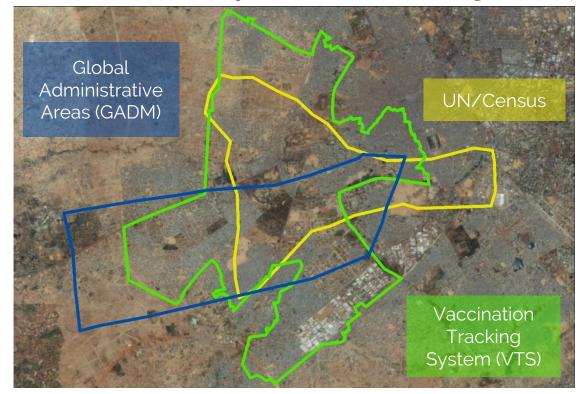

## **Subnational Boundaries**

Validated administrative boundaries allow for efficient development processes to be planned and implemented in an evidence-based, place-based manner:

GRID<sup>3</sup> provides the methodology to empirically access, edit, and validate sub-national administrative boundaries.

Various Boundary Sources for Gwale, Nigeria

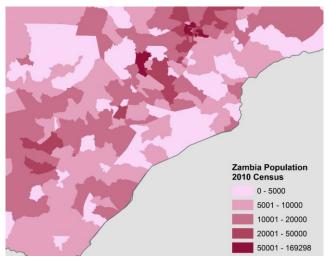

## **High-Resolution Population Maps**

High-resolution population estimates and demographic characteristics are fundamental to understanding and managing development processes:

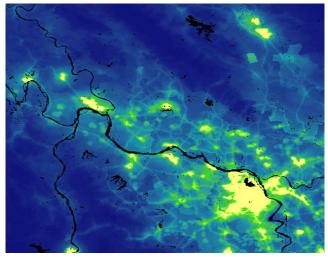

## Census-Based Population Mapping

Southern Zambia, Ward level UNFPA

Depending on needs and feasibility, we update current population maps using either census or model-based mapping.

## Model-based Population Mapping

Northern Vietnam, 100-meter pixels WorldPop/Flowminder

#### **Other Spatial Data Improvements**

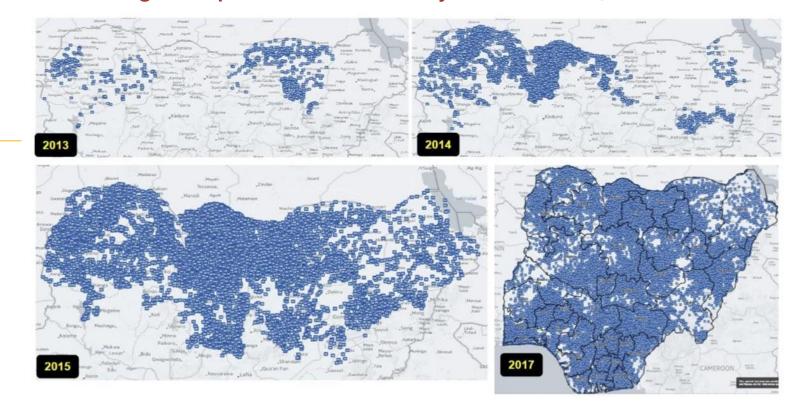

GRID<sup>3</sup> can also target and produce other spatial data layers depending on a country's current needs or desires:

#### Nigeria: Update of health facility locations (2013 to 2017)

#### **Mapping infrastructure**

locates development investments in space. It makes possible full integration of development planning and monitoring with other spatial reference data.

# GRID<sup>3</sup> Zambia Implementation

#### 2010 Census of Population and Housing

- The fifth national population census that Zambia
- Completed by 30th November 2010
- Paper based

#### Next Census - 2020:

- Preparations under way
- Geo-referenced to household level

## GRID<sup>3</sup> Zambia: Overarching Goal

To strengthen national geospatial capacity, and promote effective coordination across government actors, donors, the private sector, academia, and NGOs for collection, processing and utilisation of such data in support of national development efforts.

#### GRID<sup>3</sup> Zambia National Engagement

#### Key stakeholders

- Central Statistical Office Zambia (CSO)
- Ministry of National Development Planning
- Ministry of Lands
  - Surveyor General's Office
  - National Spatial Data Infrastructure(NSDI)- Committee comprises 15 Governments Departments
- University of Zambia
- UN Country team
- Development partners

#### Priorities for GRID<sup>3</sup> support to Zambia

1. Support the National Spatial Data Infrastructure

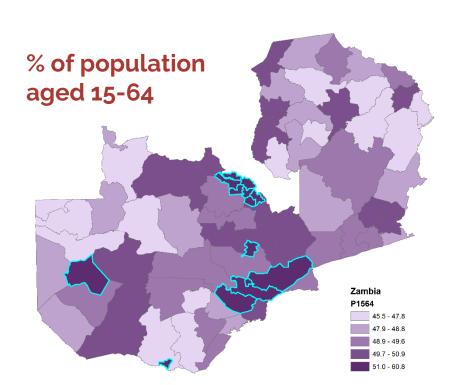

2. Population estimation in pre-enumeration phase of the 2020 census

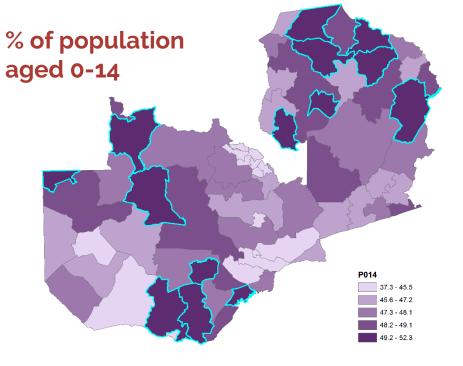

3. Strengthening capacity to collect, manage and utilise georeferenced & geospatial census data

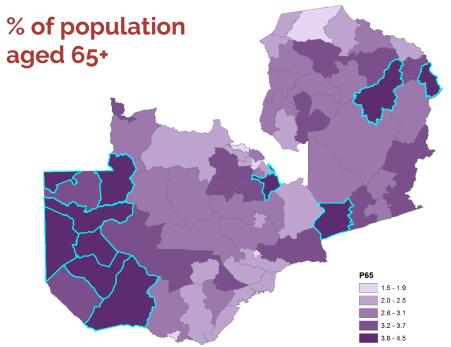

# GRID<sup>3</sup> Zambia Expected outputs - Examples

# Using 2010 census for the 7th National Development Plans

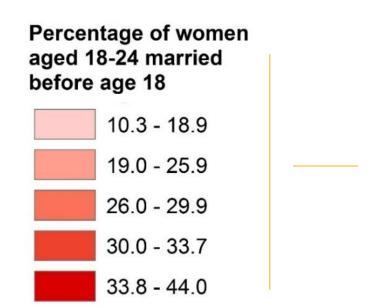

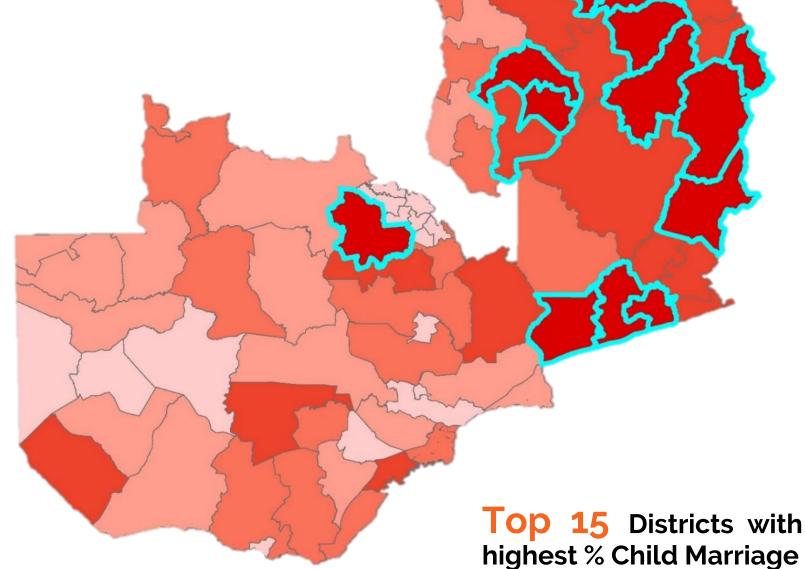

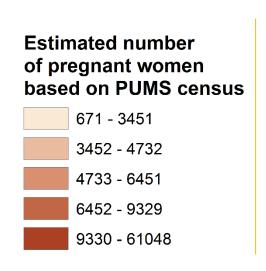

Using 2010 census for the 7th National Development Plans

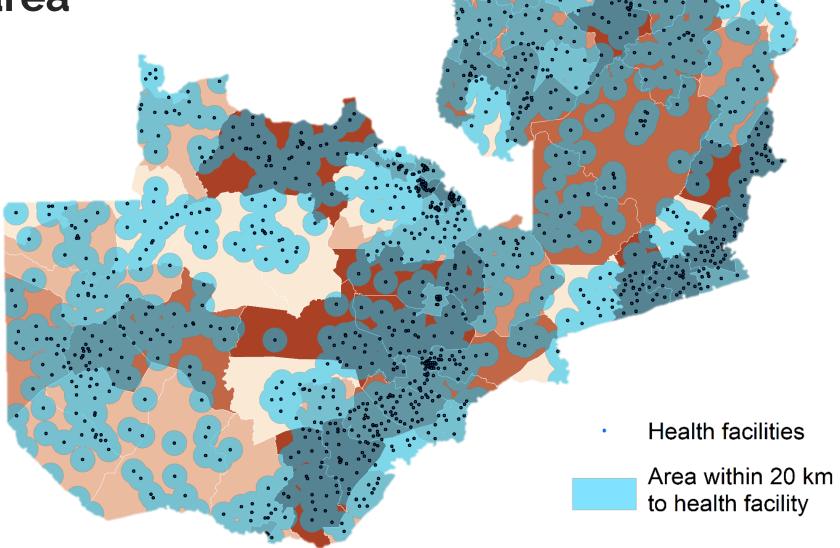

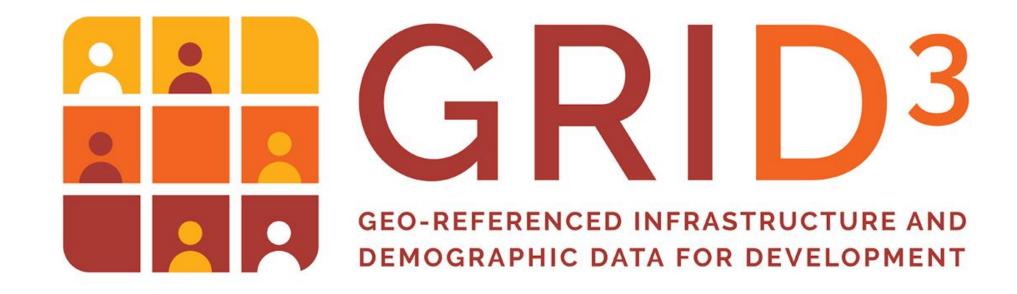

-- Example of key indicator: Child Marriage
