

Cabinet Office

William Priest, Geospatial Commission, UK Government

United Nations World Geospatial Information Congress
The Geospatial Way to a Better World
19 November 2018

The geospatial moment for the UK

UK government has committed to maximise the value from geospatial data and to help enable the digital economy

Geospatial Commission is being established with £80 million of initial funding

Geospatial data and technologies empowers:
a **smart government** and a **smart nation**

Geospatial data offers an economic and social value opportunity

- The **data revolution** is changing the way we live, work, and travel
- New technologies that drive use, collection and storage of this data are **increasing the relevance and quality** of geospatial data
- Better geospatial data is then providing us with **new insights** about efficiencies in a range of sectors - from housing to finance - increasing the potential to be more productive

Cabinet Office

There is a strong digital thread connecting government programmes

Department for
Business, Energy
& Industrial Strategy

National Productivity Investment Fund: £37 billion fund investing in areas critical to productivity

Industrial Strategy: Focusing on boosting UK productivity with investment in skills, industries and infrastructure, to equip the UK for the fourth industrial revolution

HM Treasury

Understanding the value of data: Discussion paper on the economic value of data and the challenges to address to strengthen the UK's position as a world leader in data-driven innovation

Government Digital
Service

Smart government: Technology innovation in government survey to look at current activity in emerging technologies across government

Department for
Digital, Culture
Media & Sport

National Data strategy: to unlock the power of data in the UK economy and government, while building public confidence in its use

Department
for Transport

Future of mobility: One of the “Grand Challenges” - government developing a strategy for the future of urban mobility, and how to support innovation across the country

The productivity opportunity

- Productivity growth has slowed globally in the last 10 years, but the slowdown in the UK was particularly acute.
- Since 2010, the government has provided over **£500 billion** in capital investment, increased investment in skills, and reduced taxes for business to boost investment, and help drive up productivity

Chart 2 – Labour productivity relative to trend

Sources: ONS and Bank calculations.

We have identified the key geospatial areas where we can unlock economic value

- Analysis has identified a potential **£6-11 billion per annum** economic value from private sector use cases from better use and adoption of geospatial data.
- This identified five key sectors where the highest latent value was:
 - Retail and logistics
 - Property and land
 - Infrastructure and construction
 - Mobility
 - Natural resources
- Informed by this, we have identified projects which can help deliver this value

Creating more effective and efficient public services

Public services:

- Environmental management
- Emergency services
- Transport networks
- Housing and planning

Developing the UK's geospatial ecosystem

To help create the right environment to realise the potential value, the Commission will support projects in the following key areas:

- Improving data assets and standards (quality / usability / interoperability and access)
- Growing innovation
- Driving adoption of geospatial technology and applications
- Improving skills, capability and resources
- Understanding the future technology landscape

The Commission will use its resources over the next two years and beyond to fund and implement a range of projects to inform and support the emerging National Geospatial Strategy.

What we have delivered since Spring 2018:

- We have started to develop the **UK's National Geospatial Strategy**
- We have announced our **initial investments**:
 - Investment and asset map
 - Crowdsourcing location data to improve efficiency of data collection
 - Identifying underground assets
- We have been **raising awareness** of geospatial, sector wide:
 - Holding engagement events across the UK with 500 public and private sector organisations
 - 10 Downing Street hosted geospatial leaders for the first time to discuss government priorities for the sector
- **Engaging internationally** - to learn from and share with others
